IXP220 v1.82 - VISUAL DOOR CONTROL

Software – Visual Door Control

Using IP Camera Integration, the Visual Door Control Module allows for better end user site management. The operator can, from a safe location, now monitor and control up to 4 Doors (4 Locations or 4 IP Cameras) per Site. Visual Door Control also allows tracking of up to 30 Tag holders at a time on a per site basis. The Tag holder monitor refreshes every 5 seconds giving you a near real-time Tag holder tracking solution.

Control of Cameras

Within the Visual Door Control panel, three specially designed buttons allow you to take a Snapshot of the video frame, Edit the camera's settings as well as remotely Open the monitored – all via a simple click of the mouse.

The Tag holders to Monitor Panel

The Tag holders to Monitor Panel on the right-hand side of the workspace lists up to 30 Tag holders you select for monitoring. These Tag holder records appear in green initially and remain green on Door (Location) entry. On exit from the Door (Location) the record appears in red. Selecting a monitored Tag holder displays the latest Tag holder monitoring information, which includes the Door Name, Event, Date and Time.
