

Certificate of evaluation QT 1/5/2007

The product "Smoke Fluid" based on a DPG (dipropylene glycol) – water – mixture used to produce fog-screens in interior rooms by means of the Protect- Security system manufactured by company Protect located in 8361 Hasselager, Denmark, in this case device Protect 375^{XP}, was tested and evaluated by us in an interior room under conditions of application specified by the manufacturer of the device.

The test results showed no indication of the possibility of hazards through traces of DPG (dipropylene glycol) through physical contact with packaging materials exposed to the fog under the specified conditions of application.

A reduction of value of typically packaged goods through traces of dipropylene glycol can be eliminated.

All statements made refer to the conditions of application mentioned in the associated evaluation report QT 1/5/2007 from 04/07/2007 and imply the use of the fogging system according to regulations.
